

Wouldn't you like to **save an hour a day** not filling out paperwork?

On average, Automated ANTECH Requisitions, generated by DVMAX, can be processed **2-5 minutes faster than traditional paper forms**. If your practice is processing 10-12 lab requisitions a day, that can add up to a full hour a day which can be used to focus on other important issues... or take that one hour lunch break.

A Reduction in Labor

Lab requisitions are attached to bill items, so when you add a bill item to an invoice or make the corresponding entry in to the history, the ANTECH requisition is automatically updated by DVMAX. When you're finished with the invoice, the resulting ANTECH requisition lists all the required patient and lab information, thereby eliminating the time needed to look for and fill out the traditional form by hand.

No Entry Errors

The ANTECH requisition **produces a pdf 417 barcode** that contains all the necessary patient and lab information needed for processing. This means an end to human entry errors and illegible forms. You can be assured that your requisitions will be accurate and legible.

Improved Tracking

As the requisitions are automatically processed and linked to a bill item you can be assured that the form has been properly processed and that there will be no missed charges on the invoice.

Automatic Retrieval

The Lab Log area of DVMAX automatically pulls down ANTECH results as they become available. Because of the improved accuracy with the Automated ANTECH Requisitions, results should no longer be left unassigned or assigned to the wrong patient. Accurate results are ready for use and attached to the patient record within minutes of being made available by ANTECH, even in the middle of the night.

Upgrade to DVMAX Practice v7.0 now and Recieve Free Training!

ANTECH Requisitions are available in **DVMAX Practice v7.0.11r3 and above**. For those not currently using DVMAX Practice v7.0, we are offering a **limited time upgrade offer**. If you upgrade now, we will offer a free ANTECH Requisitions training.
