

Integrated Payment Processing in DVMAX Practice

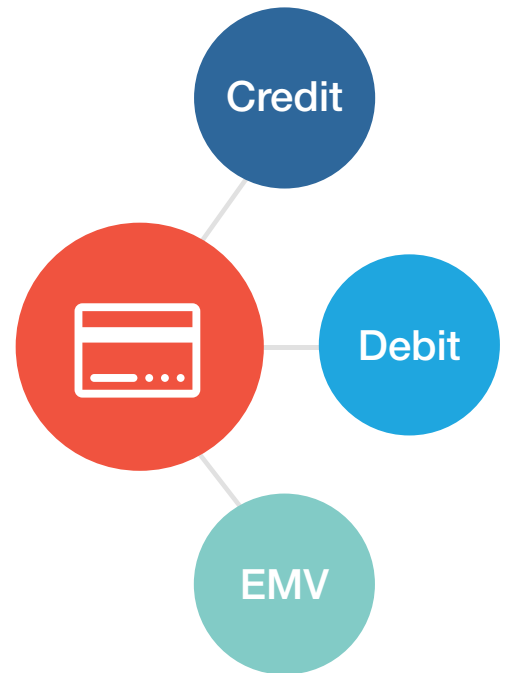

Take advantage of all the benefits of credit card processing right in DVMAX. Credit and debit card processing in DVMAX allows you to capture and transfer all credit card transaction data directly to the client's financial history. You will no longer need to manually enter card information and all payments, returns and refunds are automatically recorded when the transaction is processed. DVMAX does all this for you as well as keeping a running reconciliation of credit and debit accounts.

CCP in DVMAX Provides:

- All credit and debit payments can be paid through DVMAX – simply swipe and click
- All transactions are directly recorded in the Client record
- No more manual processing means entry mistakes and mismatched reports are eliminated
- Advanced security with a system that is PCI PA-DSS certified and uses EMV card technology.

Security & EMV

DVMAX Credit Card Processing is PCI PA-DSS compliant, providing an additional layer of protection against mounting credit card fraud. DVMAX Practice v8.5 introduces DVMAX CCP with EMV card technology. EMV, offered by CCP partner OpenEdge, is a fraud-reducing, “smart chip” technology for credit cards.
